Things we did the bad way !
Deleting the item (method from parent to child)
Every details component makes async request to get that specific
No Central biz logic for handing changes

Redux

Store - Object
  - collection of global app wide data

Reducers - Functions
Actually changes store data

Actions - Object
Actions notify redux that data(store) has to change

ActionCreators - Function
  Functions that return an action

react-redux

Online Training App - Redux Toolkit

Actions
-Add Item to Cart
-Delete Course
-Add new course
-Increment Likes

Reducers
